Functions and  
performance levels:

**basic requirements for safety footwear (SB)** (see Table 2 and 3 of EN ISO 20345:2011):  
all mandatory ones, among which:

**SRC(\*) = Slip resistance** - meets the following requirement:

- surface: ceramic / lubricant: detergent solution;
- surface: steel / lubricant: glycerol.

**Additional requirements** (Tab. 18 and 20 of EN ISO 20345:2011):

**S3** = closed seat region, antistatic properties, energy absorption of seat region,  
resistance to fuel oil, water penetration resistance and absorption (water-repellent  
upper), penetration resistance, cleated outsole.

**(\*)**: the final level of the anti-slip features is achieved after the first hours of trial stage.

Note: the penetration resistance of the synthetic stitch proof insole tends to decrease with the  
diameter of the perforating object; in return the synthetic insole offers more protective surface and  
ergonomics advantages (flexibility, insulation, humidity and impact absorption).

Marking:

on a label stitched inside the upper, on the bellow-tongue – it includes the following  
information:

(see example below)

- **CE Marking** attesting PPE conformity to all the provisions of Directive 89/686/EEC  
(and any subsequent amendments);
- name of the Manufacturer ;
- unique/unambiguous identification of the footwear (art. alphanumerical code);
- Technical Harmonized Standard of reference;
- safety symbols;
- size of footwear (printed in the outsole);
- month and year of production (printed in the outsole with a clock indicator).
