

ALBA&N SAFETY SHOES

Flexible, Comfortable, Safe

Past and future coexist in the name of innovation

An experience gained for over 30 years from which comes the specialized know-how of Alba Shoes Group, a leading company in the sector of work and safety footwear.

ABOUT US

ALBA SHOES GROUP

AlbaShoes Group was born in Lac, Albania, and focused exclusively on the production of uppers. A few years later, the upper factory intensified its activity so much that it became a point of reference for internationally renowned companies and favored the opening of new production sectors in Tirana, Valona and Corovode. Foresight, dedication and resourcefulness, as well as continuous investments in new technologies and machines, have made it possible to implement new production processes up to the completion of the complete cycle of footwear, especially safety ones.

While the company established itself among the most important economic realities of Albania, in 2006, it was decided to set up in Italy, in the footwear district of Barletta-Andria-Trani, the company Alba&n.

- 62,000 m2 of total corporate property area
- 7 companies in Albania and Italy
- 1,800 employees
- 6 PU or PU/PU or PU/TPU or PU/Rubber injection systems
- 1 injection <carousel> for insoles

EXTRA QUALITY TECHNOLOGY

After an initial specialization in private labels, through collaboration with prestigious world brands, a vast and varied range of products was also born with the company-owned brands Alba & n and XQT, brands synonymous with style, quality and comfort.

Today

Alba Shoes Group has customers all over the world and currently exports to more than 45 countries. Alba & n represents the bridgehead company for the European and world market, which concentrates the Group's Research and Development department as well as the commercial and logistics management.

The latest corporate investments concern the further expansion of the Lac factory and the installation of a PU injection system for the on-site production of insoles.

ALBA&N

WHY CHOOSE ALBA&N?

Attention to Safety

All footwear produced by the Group is certified in accordance with the standards EN ISO 20345: 2011 and 20347: 2012 by the bodies responsible for this purpose. However, thanks to the laboratories present in the Alba factories, equipped with the most modern equipment, the Group's technicians are able to verify the safety of footwear and their components on site by carrying out the same tests that are performed by the Accredited Laboratories for Certification of PPE.

Attention to quality

Our Group is certified according to the ISO 9001: 2015 standard by TÜV AUSTRIA. Our constant interest in Research and Development, in technological innovation and in the search for the best materials on the market are the key factors of our success and make our products unique in terms of reliability, comfort and aesthetics.

GREEN AWARENESS

Aware of the growing and pressing environmental problems, especially those related to waste disposal, the designers of Alba & n have just developed a line of footwear with uppers coming from the recycling of post-consumer PET bottles. At the same time, research continues for eco-sustainable materials and accessories, recycled and recyclable.

WHY CHOOSE OUR GROUP

✓ **CERTIFICATE**

Complete Production Cycle inside
of our companies

✓ **CERTIFICATE**

European production

✓ **CERTIFICATE**

Flexibility, Very Wide Range,
PRIVATE LABEL

✓ **CERTIFICATE**

Very low minimum order required

✓ **CERTIFICATE**

Italian design

✓ **CERTIFICATE**

90% Made in Italy raw materials

✓ **CERTIFICATE**

Materials compliant with the "Reach"
regulation

✓ **CERTIFICATE**

Quality Management System
certified by TÜV AUSTRIA

TECHNOLOGY

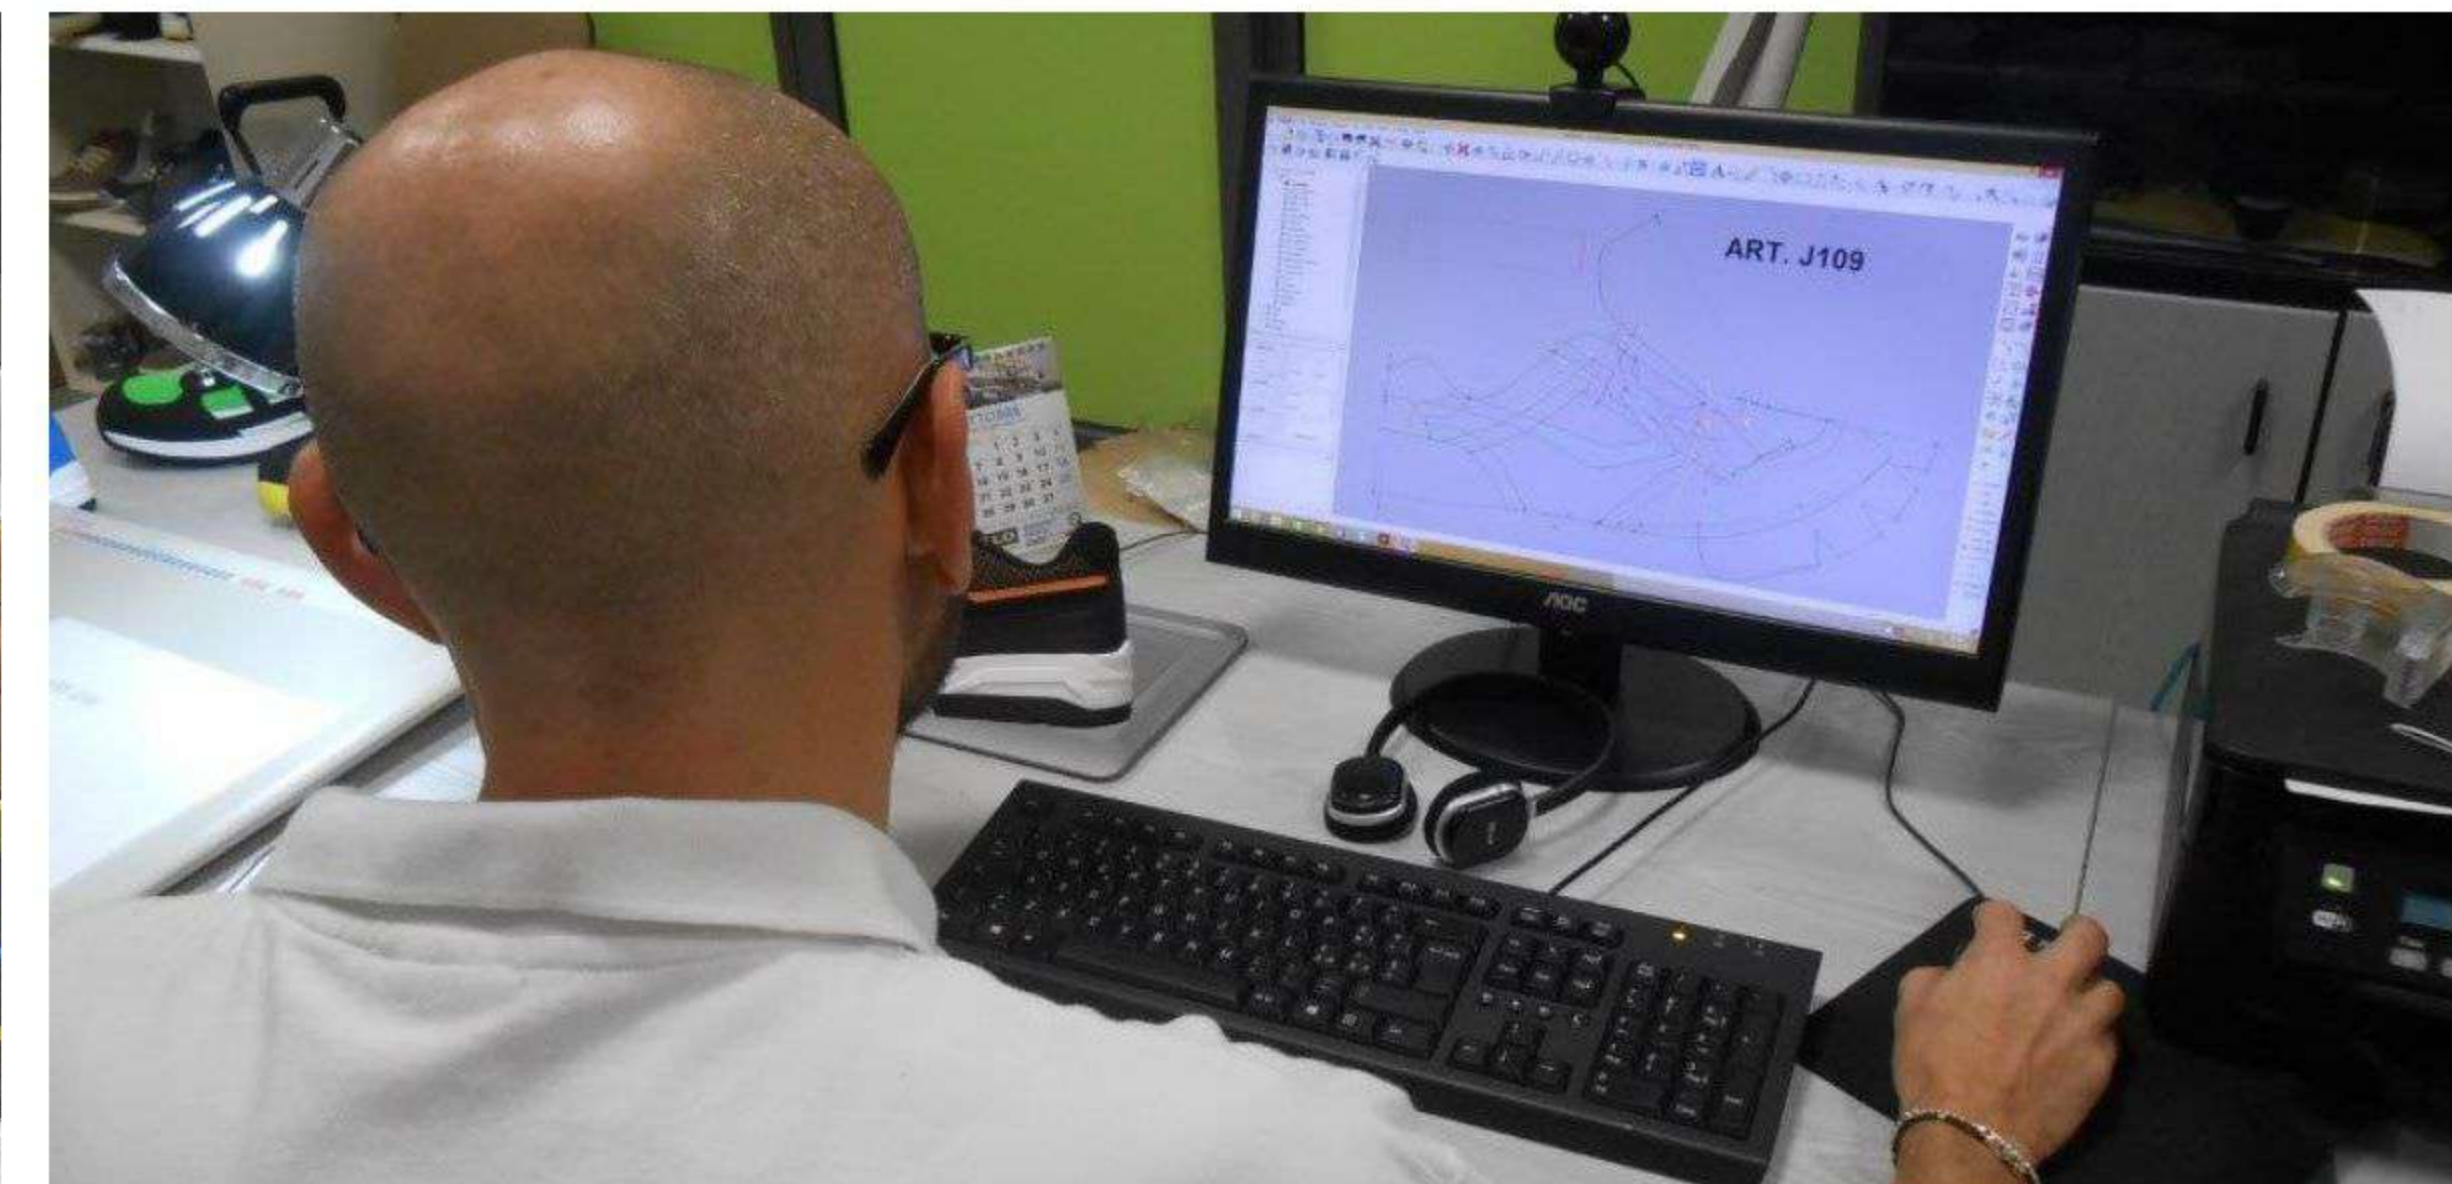

OUR PRODUCTION CYCLE

In our factories in Lac and Valona, Albania, the complete production cycle of our products takes place: work and safety footwear.

The initial phase of **Design, Research and Development** is carried out in our Italian offices, located in Trani, or in the strategic district of Barletta-Andria-Trani.

The district is very active and in constant ferment thanks to the presence of a dense network of operators specialized in the supply of components for the footwear industry.

Here we decide which inputs to welcome, which technological innovations to undertake to develop products that are always in step with the needs of the market and in line with current safety regulations.

TECHNOLOGY

OUR PRODUCTION CYCLE

The production, in all its phases, takes place in our Albanian production units in constant contact with the Italian company and under the supervision of selected and specialized managers.

The stages are:

1

Sample **CHECK** of incoming raw materials and components through laboratory machinery present in our companies:

2

CUTTING of leather and synthetic materials through dozens of shearing presses present in all our production units;

3

STITCHING components of the uppers through dozens of dedicated lines, in which the operators use cutting-edge sewing machines;

TECHNOLOGY

OUR PRODUCTION CYCLE

4

PRELASTING of the uppers with safety toecaps on latest generation shoe pre-assembly machines;

5

INJECTION of single-density PU and bi-density soles (PU / PU, PU / TPU, PU / rubber) through 6 direct injection "rides", operating 24h/24h and present in our factories in Lace and Valona;

6

Final product **QUALITY CONTROL**;

7

PACKAGING, LABELING and start of **TRANSPORT**.
